

The Concepts of Mathematical Finance

M.S. Joshi

Contents

<i>Preface</i>	<i>page</i> xiii
1 Risk	1
1.1 What is risk?	1
1.2 Market efficiency	2
1.3 The most important assets	5
1.3.1 Bonds	5
1.3.2 Stocks and shares	6
1.3.3 The corporate bond	8
1.3.4 Positivity	8
1.3.5 The risk paradigm outside the markets	8
1.4 Diversifiable risk	9
1.5 The use of options	10
1.6 Classifying market participants	13
1.7 Key points	14
1.8 Further reading	15
1.9 Exercises	16
2 Pricing Methodologies and Arbitrage	17
2.1 Some possible methodologies	17
2.2 Delta hedging	20
2.3 What is arbitrage?	21
2.4 The assumptions of mathematical finance	22
2.4.1 Not moving the market	22
2.4.2 Liquidity	22
2.4.3 Shorting	23
2.4.4 Fractional quantities	23
2.4.5 No transaction costs	23
2.4.6 Models	23

2.5	An example of arbitrage-free pricing	24
2.6	The time value of money	26
2.7	Mathematically defining arbitrage	29
2.8	Using arbitrage to bound option prices	32
2.9	Conclusion	43
2.10	Key points	43
2.11	Further reading	43
2.12	Exercises	44
3	Trees and Option Pricing	46
3.1	A two-world universe	46
3.1.1	Pricing in a one-step tree by hedging	47
3.1.2	Risk-neutral valuation	48
3.1.3	Pricing by replication	51
3.2	A three-state model	52
3.3	Multiple time steps	54
3.3.1	More realism	54
3.3.2	Pricing in a two-step model by hedging	55
3.3.3	A two-step model and risk-neutral valuation	57
3.4	Many time steps	58
3.5	A normal model	60
3.6	Putting interest rates in	63
3.7	A log-normal model	65
3.7.1	The real world behaviour	65
3.7.2	The risk-neutral world behaviour	66
3.8	Consequences	73
3.9	Recap	74
3.10	Key points	75
3.11	Further reading	76
3.12	Exercises	76
4	Practicalities	78
4.1	Introduction	78
4.2	Trading volatility	78
4.3	Smiles	80
4.4	The Greeks	82
4.5	Alternate models	90
4.5.1	Jumps	91
4.5.2	Stochastic volatility	94
4.5.3	Random time	95
4.5.4	Which model?	95

4.6	Transaction costs	96
4.7	Key points	97
4.8	Further reading	97
4.9	Exercises	98
5	The Ito Calculus	99
5.1	Introduction	99
5.2	Brownian motion	99
5.3	Stochastic processes	102
5.4	Ito's lemma	107
5.5	Applying Ito's lemma	111
5.6	An informal derivation of the Black–Scholes equation	115
5.7	Justifying the derivation	116
5.8	Solving the Black–Scholes equation	119
5.9	Dividend-paying assets	122
5.10	Key points	124
5.11	Further reading	126
5.12	Exercises	126
6	Risk Neutrality and Martingale Measures	128
6.1	Plan	128
6.2	Introduction	129
6.3	The existence of risk-neutral measures	131
6.4	The concept of information	142
6.5	Discrete martingale pricing	148
6.6	Continuous martingales and filtrations	154
6.7	Identifying continuous martingales	156
6.8	Continuous martingale pricing	157
6.9	Equivalence to the PDE method	161
6.10	Hedging	162
6.11	Time-dependent parameters	165
6.12	Completeness and uniqueness	166
6.13	Changing numeraire	167
6.14	Dividend-paying assets	169
6.15	Working with the forward	170
6.16	Key points	174
6.17	Further reading	175
6.18	Exercises	175
7	The Practical Pricing of a European Option	177
7.1	Introduction	177
7.2	Analytic formulae	178

7.3	Trees	179
7.4	Numerical Integration	185
7.5	Monte Carlo	188
7.6	PDE methods	193
7.7	Replication	194
7.8	Key points	196
7.9	Further reading	196
7.10	Exercises	197
8	Continuous Barrier Options	199
8.1	Introduction	199
8.2	The PDE pricing of continuous barrier options	202
8.3	Expectation pricing of continuous barrier options	205
8.4	The reflection principle	205
8.5	Girsanov's theorem revisited	208
8.6	Joint distribution	211
8.7	Pricing continuous barriers by expectation	215
8.8	American digital options	217
8.9	Key points	218
8.10	Further reading	219
8.11	Exercises	219
9	Multi-Look Exotic Options	221
9.1	Introduction	221
9.2	Risk-neutral pricing for path-dependent options	222
9.3	Weak path dependence	225
9.4	Path generation and dimensionality reduction	225
9.5	Moment matching	230
9.6	Trees, PDEs and Asian options	233
9.7	Practical issues in pricing multi-look options	234
9.8	Greeks of multi-look options	236
9.8.1	Pathwise method	236
9.8.2	Likelihood ratio method	237
9.8.3	Central method	238
9.9	Key points	239
9.10	Further reading	240
9.11	Exercises	240
10	Static Replication	242
10.1	Introduction	242
10.2	Continuous barrier options	243
10.3	Discrete barriers	246

10.4	Path-dependent exotic options	248
10.5	The up-and-in put with barrier at strike	251
10.6	Put-call symmetry	252
10.6.1	A simple model	252
10.6.2	The zero interest-rates log-normal case	253
10.6.3	The non-zero interest rates log-normal case	255
10.7	Conclusion and further reading	256
10.8	Key points	258
10.9	Exercises	259
11	Multiple Sources of Risk	261
11.1	Introduction	261
11.2	Higher-dimensional Brownian motions	262
11.3	The higher-dimensional Ito calculus	264
11.4	The higher-dimensional Girsanov theorem	267
11.5	Practical pricing	272
11.6	The Margrabe option	273
11.7	Quanto options	276
11.8	Higher-dimensional trees	278
11.9	Key points	281
11.10	Further reading	282
11.11	Exercises	282
12	Options with Early Exercise Features	283
12.1	Introduction	283
12.2	The tree approach	286
12.3	The PDE approach to American options	289
12.4	American options by replication	291
12.5	American options by Monte Carlo	293
12.6	Upper bounds by Monte Carlo	296
12.7	Key points	298
12.8	Further reading	298
12.9	Exercises	299
13	Interest Rate Derivatives	301
13.1	Introduction	301
13.2	The simplest instruments	304
13.2.1	Zero-coupon bonds and present valuing	304
13.2.2	Forward rates	305
13.2.3	Swaps	307
13.3	Caplets and swaptions	311
13.3.1	Definitions	311

13.3.2	Black formulas	312
13.3.3	LIBOR-in-arrears	314
13.3.4	Pricing a swaption	315
13.4	Curves and more curves	316
13.4.1	Introduction	316
13.4.2	Gilts	317
13.4.3	Repos	317
13.4.4	The LIBOR curve	318
13.5	Key points	319
13.6	Further reading	319
13.7	Exercises	319
14	The Pricing of Exotic Interest Rate Derivatives	321
14.1	Introduction	321
14.2	Decomposing an instrument into forward rates	325
14.3	Computing the drift of a forward rate	333
14.4	The instantaneous volatility curves	336
14.5	The instantaneous correlations between forward rates	339
14.6	Doing the simulation	341
14.7	Rapid pricing of swaptions in a BGM model	344
14.8	Automatic calibration to co-terminal swaptions	346
14.9	Lower bounds for Bermudan swaptions	349
14.10	Upper bounds for Bermudan swaptions	354
14.11	Factor reduction and Bermudan swaptions	357
14.12	Interest-rate smiles	360
14.13	Key points	363
14.14	Further reading	364
14.15	Exercises	364
15	Incomplete Markets and Jump-Diffusion Processes	366
15.1	Introduction	366
15.2	Modelling jumps with a tree	367
15.3	Modelling jumps in a continuous framework	369
15.4	Market incompleteness	372
15.5	Super- and sub-replication	375
15.6	Choosing the measure and hedging exotic options	382
15.7	Matching the market	384
15.8	Pricing exotic options using jump-diffusion models	385
15.9	Does the model matter?	388
15.10	Log-type models	390
15.10	Homogeneity	390

15.10. Convexity	391
15.10. Floating smiles	392
15.11 Key points	393
15.12 Further reading	394
15.13 Exercises	395
16 Stochastic Volatility	397
16.1 Introduction	397
16.2 Risk-neutral pricing with stochastic volatility models	398
16.3 Monte Carlo and Stochastic Volatility	399
16.4 Hedging issues	402
16.5 PDE pricing and transform methods	403
16.6 Stochastic volatility smiles	406
16.7 Pricing exotic options	407
16.8 Key points	407
16.9 Further reading	408
16.10 Exercises	409
17 Variance Gamma Models	410
17.1 The Variance Gamma process	410
17.2 Pricing options with Variance Gamma models	413
17.3 Pricing exotic options with Variance Gamma models	417
17.4 Deriving the properties	418
17.5 Key points	420
17.6 Further reading	420
17.7 Exercises	421
18 Smile Dynamics and the Pricing of Exotic Options	422
18.1 Introduction	422
18.2 Smile dynamics in the market	423
18.2.1 Sticky or floating	423
18.2.2 Time dependence	424
18.3 Dynamics implied by models	425
18.3.1 Jump-diffusion smiles	426
18.3.2 Stochastic-volatility smiles	427
18.3.3 Variance Gamma smiles	428
18.3.4 Displaced-diffusion smiles	429
18.3.5 Dupire/Derman–Kani smiles	430
18.4 Matching the smile to the model	431
18.4.1 Equity smiles	431
18.4.2 FX smiles	434
18.4.3 Caplet smiles	434

18.5 Hedging	435
18.6 Matching the model to the product	438
18.7 Key points	440
18.8 Further reading	441
Appendix A Financial and Mathematical Jargon	442
Appendix B Computer Projects	447
Appendix C Elements of Probability Theory	473
Appendix D Hints and Answers to Exercises	485
<i>Bibliography</i>	498
<i>Index</i>	504
